

ABSTRACT OF THE DISCLOSURE

A first suspension arm mounting structure for attaching left and right third lower arms as left and right suspension arms to a subframe is provided.

- 5 The mounting structure includes a middle crossmember extended transversely across the subframe formed in a rectangular shape, and left and right lower brackets for mounting the left and right third lower arms thereto. The left and right lower brackets are integrally formed with left and right end portions of the middle crossmember.
